

With this visualization, I am answering the question: which country lost the most vertebrates, invertebrates, and plants? I separated the graphs for invertebrates, vertebrates, and plants into different graphs to make the information easier to understand. I also included the most total lost graph for completeness of analysis. From my graphs, I can see that the countries with the most lost vertebrates are Colombia, India, Indonesia, Madagascar, and Mexico. The countries with the most lost invertebrates are Australia, Indonesia, Malaysia, the Philippines, and the United States. The countries with the most lost plants are Brazil, Ecuador, Madagascar, Malaysia, and Mexico. Finally, the countries with the most total lost of life is Ecuador, Indonesia, Madagascar, Malaysia, and the United States.
